#### **DETAILED ACTION**

#### Applicant's Response to Election/Restrictions Requirement

1. Applicant's election without traverse the Group II, claims 4-7, is acknowledged. Claims 1-3 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected claims.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 2. Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mak et al. (US 2002/0198136 A1).

Mak teaches or suggests the use of calcium channel blockers (e.g., diltiazem, nifedipine, nimodipine, felodipine, nicardipine, etc...) alone or in combination with variety compounds including NO donors, cholinergic modulators, phosphodiesterase inhibitors, superoxide

scavengers, potassium channel activators, estrogen-like compounds, testosterone-like compounds, benzodiazepines, adrenergic nerve inhibitors, smooth muscle relaxants, adenosine receptor modulators, adenylyl cyclase activators, endothelin receptor antagonists, bisphosphonates and cGMP-dependent protein kinase activators for the treatment of urogenital disorders including vulvodynia (abstract; page 1, para. 10; page 3, para. 15; page 4, para. 16, column column 7, para. 54; Examples 4-5, 15-16 and 19), wherein said calcium channel blockers can be administered in vaginal suppository from (page 3, para. 15 and page 3 para. 16).

The teaching of Mak differs from the claimed invention in "administering said dosage from at least once daily until symptoms are reversed" and the specific dosage amount administered in "approximately 50mg".

However, those of ordinary skill in the art will readily optimize effective dosages and concurrent administration regimens as determined by good medical practice and the clinical condition of the individual patient. Regardless of the manner of administration, the specific dose may be calculated according to body weight, body surface area or organ size. Further refinement of the calculations necessary to determine the appropriate dosage for treatment involving each of the above mentioned formulations is routinely made by those of ordinary skill in the art and is within the ability of tasks routinely performed by them without undue experimentation.

Applicant has presented no evidence to establish the unexpected or unobvious nature of the claimed invention, and as such, claims 4-7 are properly rejected under 35 U.S.C. 103.

## Conclusion

3. No Claim is allowed.
